Hamid Dashti

Geospatial Computational Scientist — Research Computing Center
University of Chicago
6045 Kenwood | Chicago, IL 60637
(208) 991-8748 | hdashti@uchicago.edu

RESEARCH INTERESTS

Terrestrial carbon and biogeochemical cycling, vegetation demographic and Earth system modeling, land-atmosphere interaction, radiative transfer and imaging spectroscopy, geospatial AI for global change ecology.

EDUCATION

Ph.D. in Geosciences, Boise State University (Idaho, USA) 2014 – 2019
M.Sc. in Remote Sensing and GIS, Shahid Beheshti University (Iran) 2008 – 2011
B.Sc. in Natural Resources Engineering, Gorgan University (Iran) 2003 – 2008

EXPERIENCE

University of Chicago 2025 – Present
Geospatial Computational Scientist, Research Computing Center

- Lead computational scientist on three funded projects spanning environmental science, biomedicine, and human-environment interactions.
- Established a nudged CESM2 modeling capability on university HPC, enabling land-atmosphere interaction experiments for campus research groups.
- Developing retrieval methods for NASA PACE hyperspectral imagery, advancing surface reflectance products for vegetation and dryland ecosystems.
- Designed and taught workshops on Earth system modeling and scalable geospatial analysis for graduate students, postdocs, and faculty across the Physical and Social Sciences Divisions.
- Leading the geospatial AI component of New Frontiers in AI-Driven Knowledge Discovery of Human-Environment Interaction ($250K), a collaboration with the Institute for the Study of Ancient Cultures.
- Founded and advised the UChicago Space Program TORCH student team, runner-up in the NASA Space to Soil Challenge with a $25,000 award.
- Extending remote sensing and computer vision methods to health and safety research, leading to be listed as a Co-I on a $60K study of transportation access among cancer patients.

University of Wisconsin-Madison 2021 – 2025
Postdoctoral Research Associate, Department of Forest and Wildlife Ecology

- Established that canopy structure governs biome-level maximum light use efficiency through both linear and nonlinear pathways, synthesizing continental flux tower networks with satellite observations (Ecology Letters, 2025).
- Coupled an integrated assessment model with an Earth system model to examine how changes in global ecosystem productivity propagate through food systems beyond crops (first author, preprint, bioRxiv 2025).
- Conceived and wrote a NASA ROSES proposal on dryland ephemeral vegetation using PACE hyperspectral imaging ($830K, funded); not listed as Co-I due to institutional transition.
- Secured a $150K postdoctoral fellowship to couple GCAM with Earth system models and assess carbon mitigation pathways for the US dairy sector.
- Mentored PhD students in radiative transfer modeling, geospatial data science, and integrated assessment modeling, resulting in multiple co-authored publications.

University of Arizona 2019 – 2021
Postdoctoral Research Associate, School of Natural Resources and the Environment

- Introduced the concept of counterfactual recovery, showing that Arctic-boreal disturbance recovery is misjudged when measured against pre-disturbance conditions rather than undisturbed trajectories (Geophysical Research Letters, 2024; among the journal's most-read papers of 2025).
- Demonstrated that conventional approaches underestimate how land cover change alters surface energy and temperature across the Arctic-boreal region of North America (Environmental Research Letters, 2022).
- Assimilated satellite leaf area and biomass observations into CLM5, constraining simulated high-latitude carbon uptake and land surface energy exchange (two co-authored papers, JGR Biogeosciences).
- Contributed to algorithm development for NASA's Surface Biology and Geology mission, co-authoring a community perspective that has become a primary reference for the mission.
- Contributed instrumentation design and field measurements to the RainMan rainfall manipulation experiment, connecting canopy physiology to remote sensing observations.
- Chaired scientific outreach for the UA Postdoctoral Association, launching a high school science program and co-organizing the Arizona Postdoc Research Conference.

Boise State University 2014 – 2019

Graduate Research Assistant, Department of Geosciences

- Developed integrated lidar and hyperspectral methods for mapping dryland vegetation structure and composition at regional scale, establishing that empirical nitrogen retrieval in drylands yields unreliable inferences about ecosystem function.
- Parameterized and evaluated the Ecosystem Demography model for sagebrush ecosystems, characterizing its capacity to simulate dryland productivity under fire and climate variability.
- Produced and published regional vegetation and hyperspectral datasets through the ORNL DAAC, supporting subsequent NASA airborne campaign research.
- Dissertation research produced 8 peer-reviewed publications (3 first-author) in journals including IEEE Transactions on Geoscience and Remote Sensing, Remote Sensing of Environment, and Agricultural and Forest Meteorology, along with a book chapter and three published datasets.

Spatial Sciences Innovators 2012 – 2014

Co-founder, Science Team Leader, Tehran, Iran

- Co-founded a geospatial analytics startup and led the science team, proposal development, and client engagement.
- Developed a satellite-based forest monitoring system adopted nationally by Iran's Natural Resources and Watershed Management Organization.
- Directed projects on geospatial site selection, environmental impact assessment, and remote sensing applications.
- Designed and delivered educational workshops on geospatial data for natural resources, ranging from introductory to advanced levels.

GRANTS (Funded and Under Reviews)

- NASA ROSES 2024 — *The Hidden Pulse of Drylands: Global Insights into Ephemeral Vegetation Using PACE Hyperspectral Imaging* (**~$830,000**, Funded, Proposal Lead/Original Co-I)
  Developed concept and wrote proposal; stepped down from Co-I role due to institutional transition 2025
- Dairy Hub Innovation-UW Madison — *Assessing the Impact of States and National Climate Policies and Food Behavioral Changes on the US Dairy Industry* (**$150,000**, Funded, Postdoc Fellowship) 2023
- Northwest Climate Adaptation Science Center-USDA — *Semi-arid ecosystem characterization using remote sensing and data assimilation* (**~$67,000**, Funded, PhD Fellowship) 2020
- University of Chicago AI initiative — *New Frontiers in AI-Driven Knowledge Discovery of Human-Environment Interaction, History, Language, and Material Culture* (**~$250,000**, Funded, Proposal Team Member) 2025

Additional Interdisciplinary Grants*:*

- University of Chicago Comprehensive Cancer Center — *Exploratory Analysis of Medical Transportation Needs Among Cancer Infusion Patients* (**~$60,000**, Funded, Co-I) 2025

SKILLS

- **Earth System & Ecological Modeling:** Radiative transfer models (PROSAIL, DART), Earth system models (CESM, E3SM), Dynamic Global Vegetation Models (ED2, SiB), Integrated Assessment Models (GCAM), time-series analysis, disturbance detection, and change attribution.
- **Remote Sensing & Environmental Sensing Systems:** Hyperspectral, multispectral, and LiDAR systems (spaceborne, airborne, UAV, terrestrial), GEDI waveform LiDAR, Solar-Induced Fluorescence (OCO-2), terrestrial laser scanning (TLS), UAV-based sensing platforms, plant physiology instruments (LI-COR gas exchange systems, LAI meters, chlorophyll fluorometers, leaf area analyzers), end-to-end field campaign design and deployment (spectrometers, flux towers, TLS, RTK GPS).
- **Programming & Scalable Geospatial Computing:** Python (GDAL, Xarray, Dask, TensorFlow), R, shell scripting; distributed and parallel workflows on HPC/HTC systems; cloud-native geospatial analysis (Microsoft Planetary Computer, STAC, Zarr); reproducible research workflows (Jupyter, Git-based version control).
- **AI & Machine Learning:** Machine learning for regression and classification (Bayesian regression, Random Forest, PLSR, SVM), deep learning for large-scale applications, scalable AI pipelines for Earth observation and ecosystem monitoring.

TEACHING & MENTORSHIP

Instructor

- Special Topics in Remote Sensing and Ecology of the Arctic–Boreal Zone (Graduate/Undergraduate), University of Arizona 2020

Designed & Led Workshops

- Introduction to Global Change Analysis Model (GCAM), University of Chicago 2025
- Geospatial Python Part 1: Satellite & Climate Raster Analysis, University of Chicago 2025
- Geospatial Python Part 2: Scaling Geospatial Workflows with Dask, University of Chicago 2025
- Python for Analyzing Large Climate and Satellite Data, University of Wisconsin–Madison 2024

Guest Lectures

- Scientific Programming (Undergraduate), University of Wisconsin–Madison 2023
- Advanced Remote Sensing and Image Processing (Graduate), Boise State University 2018
- Remote Sensing and Image Processing (Undergraduate), Boise State University 2017
- Introduction to Remote Sensing (Undergraduate), K.N. Toosi University of Technology 2012

Mentorship & Advising

- Mentored 2 PhD students (radiative transfer modeling, geospatial AI, IAMs), leading to publications.
- Supervised undergraduate research assistants in remote sensing and climate data analysis.
- Mentored a Research Assistant Professor at UChicago on computational approaches in environmental science.
- Guided postdocs and early-career researchers through workshops, hackathons, and collaborative projects.

PROFESSIONAL WORKSHOPS

- PhysFest3 workshop, Kansas State University 2021
- CyVerse Learning - Foundations of Open Science Skills (FOSS), University of Arizona 2020
- Surface Biology and Geology (SBG) Community workshop, DC 2019
- HyspIRI Science and Applications workshop, DC 2018
- FluxCourse workshop, Boulder, CO 2017
- Hyperspectral image and signal processing: Evolution in remote sensing, Los Angeles, CA 2016

PROFESSIONAL AND ACADEMIC SERVICES

Reviewer

Remote sensing of the environment; IEEE Transactions on Geoscience and Remote Sensing; Remote sensing; Ecological Applications, Biogeoscience, Journal of Hydrology

Academic Services

- National Ecological Observatory Network, Remote sensing technical advisory group 2021-present
- NASA, Surface Geology Biology, Algorithm development working group 2014-present
- Chair of Scientific Outreach, University of Arizona Postdoctoral Association 2019-2021
- Science Careers for Students, Oscar F. Smith High School 2021
- Conference organizing committee member, "Arizona Postdoctoral Research Conference 2021", 2021
- Preparing underrepresented students for the college entrance exam, Saravan, Iran 2010
